Delta Industrial Machining Center Foundations for Autodie LLC

Autodie LLC, once the biggest tool-and-die maker in the United States, began a \$24 million investment plan to help it get a leg up on its Asian competitors... and Delta was there to help make it happen.

Grand Rapids, MI. - Autodie LLC, a storied name in the tool-and-die industry for more than four decades, is investing \$24 million to modernize the CNC milling machines and plant infrastructure. As part of the modernization, five new CNC milling machines — which cost about \$4 million each — could slice as much as 10 weeks off the 44-week die development cycle. The company sells the tooling that is used to produce outer body and major structural components of vehicles.

Of the newly added machines, Delta constructed the foundations for (3) Okuma MCR-BII, double column machining centers. The MCR-BII machines can accommodate up to 180 tools, up to 6 attachments and can handle a payload of 173,800 pounds. The scope of work for these projects consisted of the demolition of (3) existing equipment foundations, installation of over 30 tons of reinforcing steel, the precise installation and grouting of 174 machine anchor pockets and the placement & finishing of more than 750 cubic yards of concrete. The results of these efforts... a very satisfied customer with new machining center foundations that were accurately constructed, within budget and on time.

Delta offers a variety of professional services with the customers best interests in mind. These services include such items as machine & press foundations, steel slitting lines, general building maintenance & construction, concrete flatwork and steel design, fabrication & construction. With the diversity of construction knowledge that Delta brings to the jobsite it quite simply **GUARANTEES** success in all facets of the project, regardless of the scope of work.
